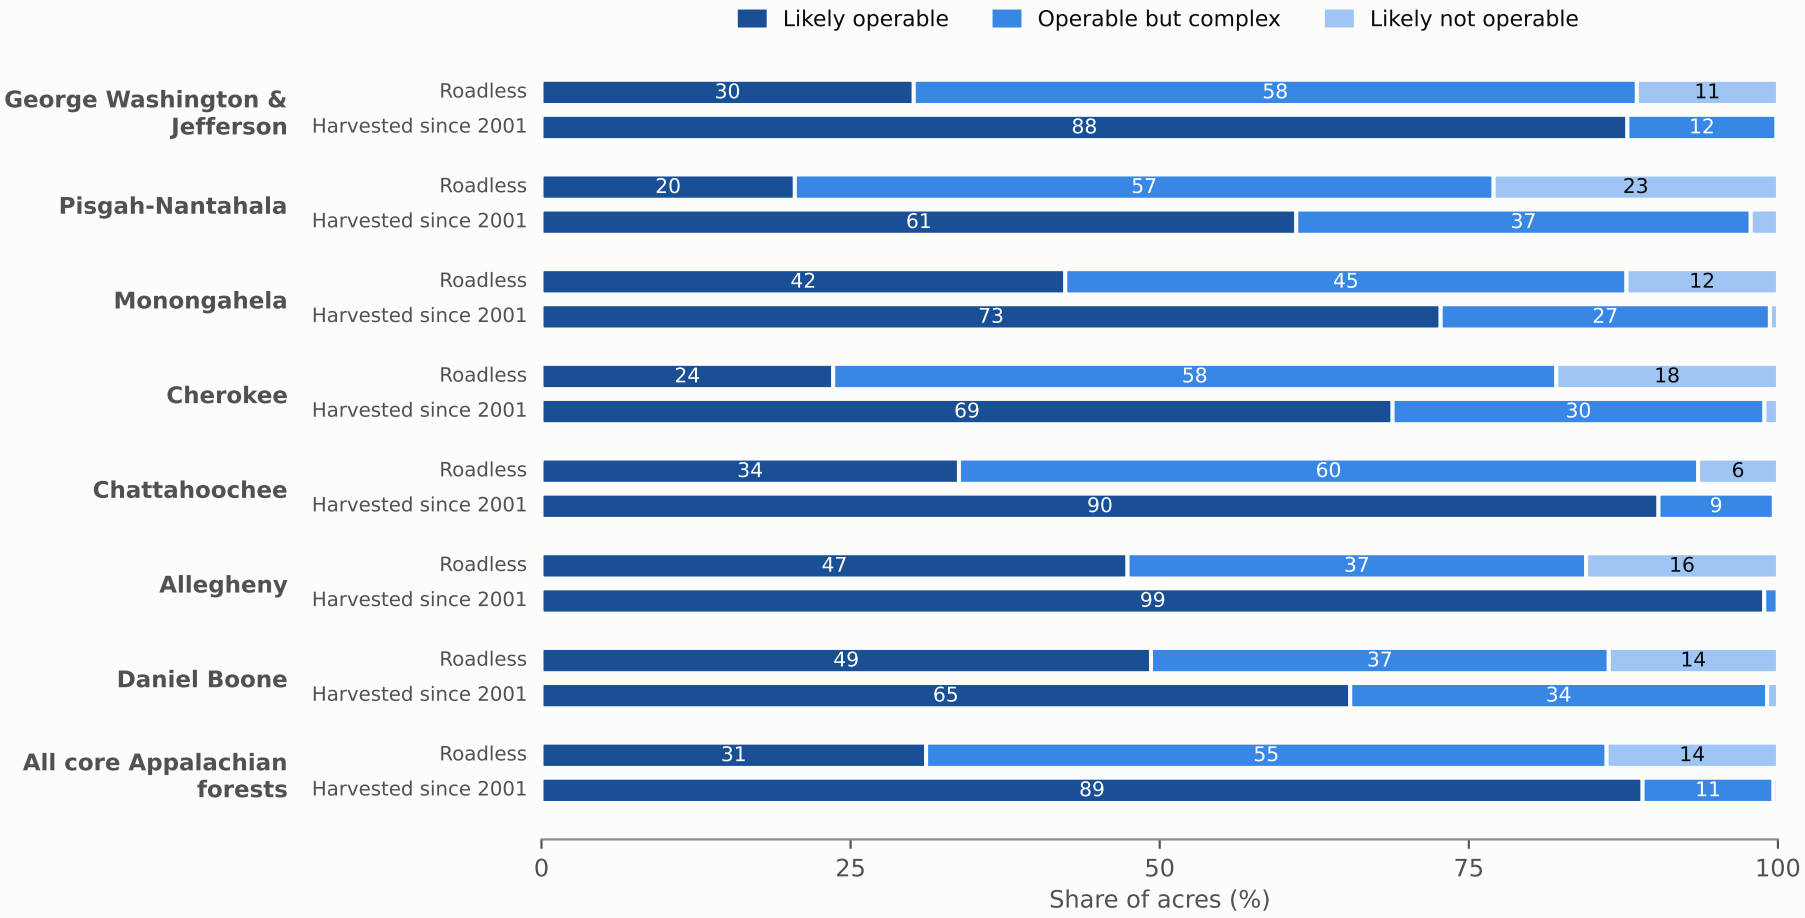
Recent harvest has occurred almost entirely on 'likely operable' ground; most roadless land falls in the costlier 'operable but complex' class



Slope and road-distance criteria from the Draft EIS (p. 74); site productivity and forest-plan restrictions not applied. Harvested = FACTS timber harvest units completed FY2001+ in the same forests.
Sources: USFS 2001 IRA inventory and FACTS; USGS 3DEP 10 m DEM; USGS TNM/TIGER and USFS roads. Roads are current, so harvest near roads is partly by construction (roads are built to harvest).
